

Application

Precision cut specimens for the Taber®Rotary Abraser or Shear/Scratch Tester.

The Model 5000 Sample Cutter is designed to cut an exact 4.2 inch(107mm) diameter specimen and punch a 1/4inch (6.5mm) center hole. An optional pad allows you to cut materials in thickness up to 1/4 inch (6.5mm).

Rugged design incorporates safety features.

The rear support prevents tip over, thus eliminating the need to secure the instrument to a work surface. A shielded punch shaft and knife retraction protect the operator from the center punch and cutting blade. The punch lever is ergonomically designed to evenly transfer force through the spring loaded punch.

Prepare a wide range of products.

The heavy duty cutting blade works on a variety of materials including: paper, cardboard, rubber, leather, vinyl, linoleum, carpet, textiles, thin metals, flexible plastics, plus many others.

Standard Features

- Rugged cast aluminium
- Dovetailed rear support
- Blade change-out access window
